**WHERE: Vista Hills Club House**  
**24060 Oakvale Dr., Valencia, CA 91355**

**Refreshments will be served**

**More info: 661 255-6899**

**D**oes your child or favorite senior citizen have asthma? Is your commute stressful? Are you getting enough exercise?

Santa Clarita has some of the worst air quality in the nation. We live in an area designated as a non-attainment zone for ozone and particulate matter (tiny particles of dust that can lodge in the lungs). Both these pollutants can cause breathing problems and lung disease. They are especially harmful to children.

Can changes in the decisions made at City Hall help? The American Lung Association says “Yes!” Energy efficiency and new land use patterns can make a huge difference in our air quality and reduce greenhouse gases, too.

As part of the Lung Association’s mission to prevent lung disease, this statewide organization has developed a “Healthy Land Use Campaign”. The goal of this campaign is to empower local residents to work with City Hall for cleaner air.

So please join us to hear a representative of the American Lung Association speak on the link between our health and local land use decisions. Find out how you can help our community on its way to cleaner air and slow global warming at the same time.

**(This presentation is jointly sponsored by SCOPE and Community Healthcare Advocates SCV)**
